## NEXT GENERATION: uPRO YARDAGE DEVICE

If Halle Berry is to Brittany Spears as Tiger Woods is to John Daly, then the uPro Hand Held GPS Device is to other yardage devices as advanced calculus is to the multiplication tables.

After a number of other yardage devices have tested the waters, finally, there is a new invention that combines the best attributes of all of the others. uPro GPS, based in Carlsbad, California, is simply what all golfers have been waiting for in terms of finding correct yardages on the golf course.

No longer do you have to go on a sedative in order to hold your hand steady enough to check yardages. Nor do you have to pay an entry fee. Nor do you have to spend a lot of time downloading course information.

uPro already has thousands of courses in its data file, with more coming on every day. This groundbreaking device uses high resolution aerial photography and satellite imagery. It also features highly developed GPS and laser range capabilities.

Early tests by a number of amateurs and professionals in the area confirm that this is the next generation of yardage devices.

"The graphics on this model are unbelievable and it is definitely easier to use than other yardage finders," says Blue Bell CC director of instruction Mike Dynda. "This is a device I can trust."

The retail price on the uPro GPS device is \$399.
